DIGITAL DEFENDERS

If It Runs Software, It Needs Updates

Set every device to update itself once, and you never have to remember again.

If it can update automatically, let it.
Check your OS and apps separately.

iPhone or iPad

Settings → General → Software Update → Automatic Updates

- Turn on automatic installation
- Check that apps auto-update too

View detailed steps

Android

Settings → System → Software updates

- Confirm system & security updates are current
- Play Store → Settings → Auto-update apps

View detailed steps

Windows PC

Start → Settings → Windows Update

- Install anything shown as waiting
- Set Active hours to avoid bad-time restarts

View detailed steps

Mac

Apple menu → System Settings → General → Software Update

- Select Automatic Updates
- Turn on macOS & Security Responses updates

View detailed steps

Your Nationwide Work Computer

Nationwide manages Windows updates centrally. Your part: pay attention to notifications, restart when prompted, and let updates finish.

Don't forget the weird stuff: smart TVs, watches, routers, cameras, doorbells. If it offers automatic updates, turn them on.
